Question 1

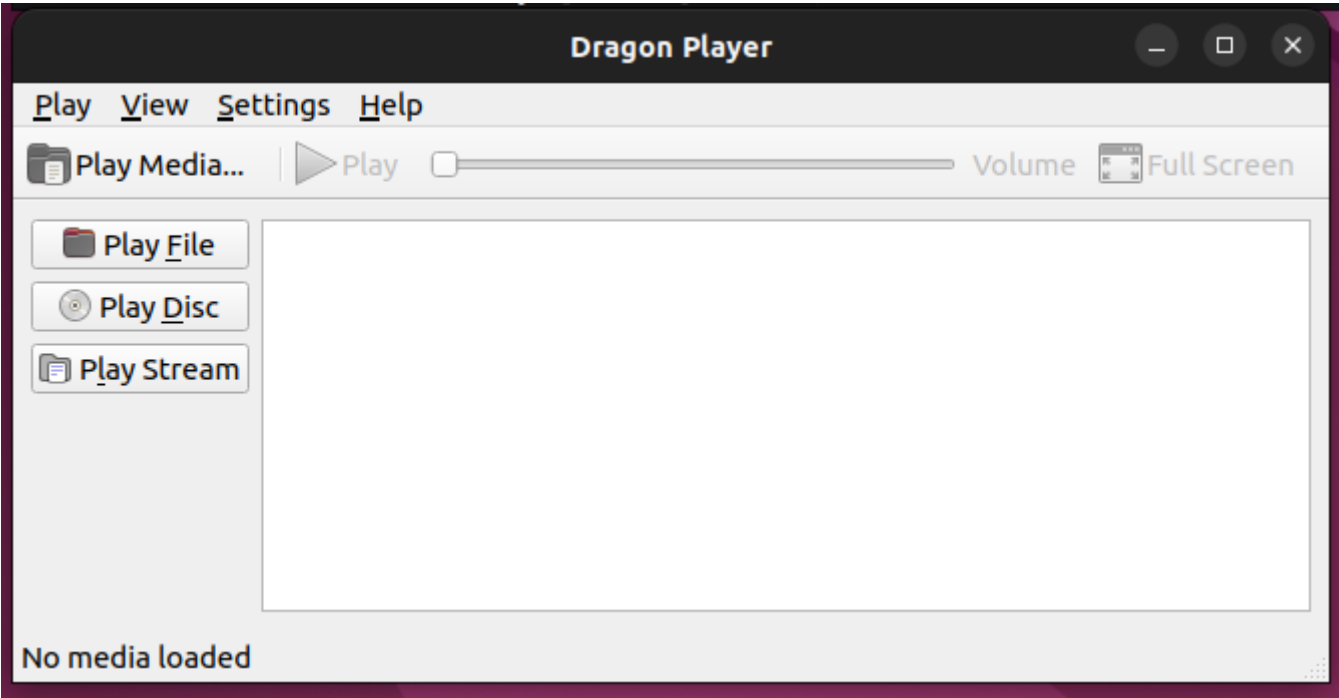

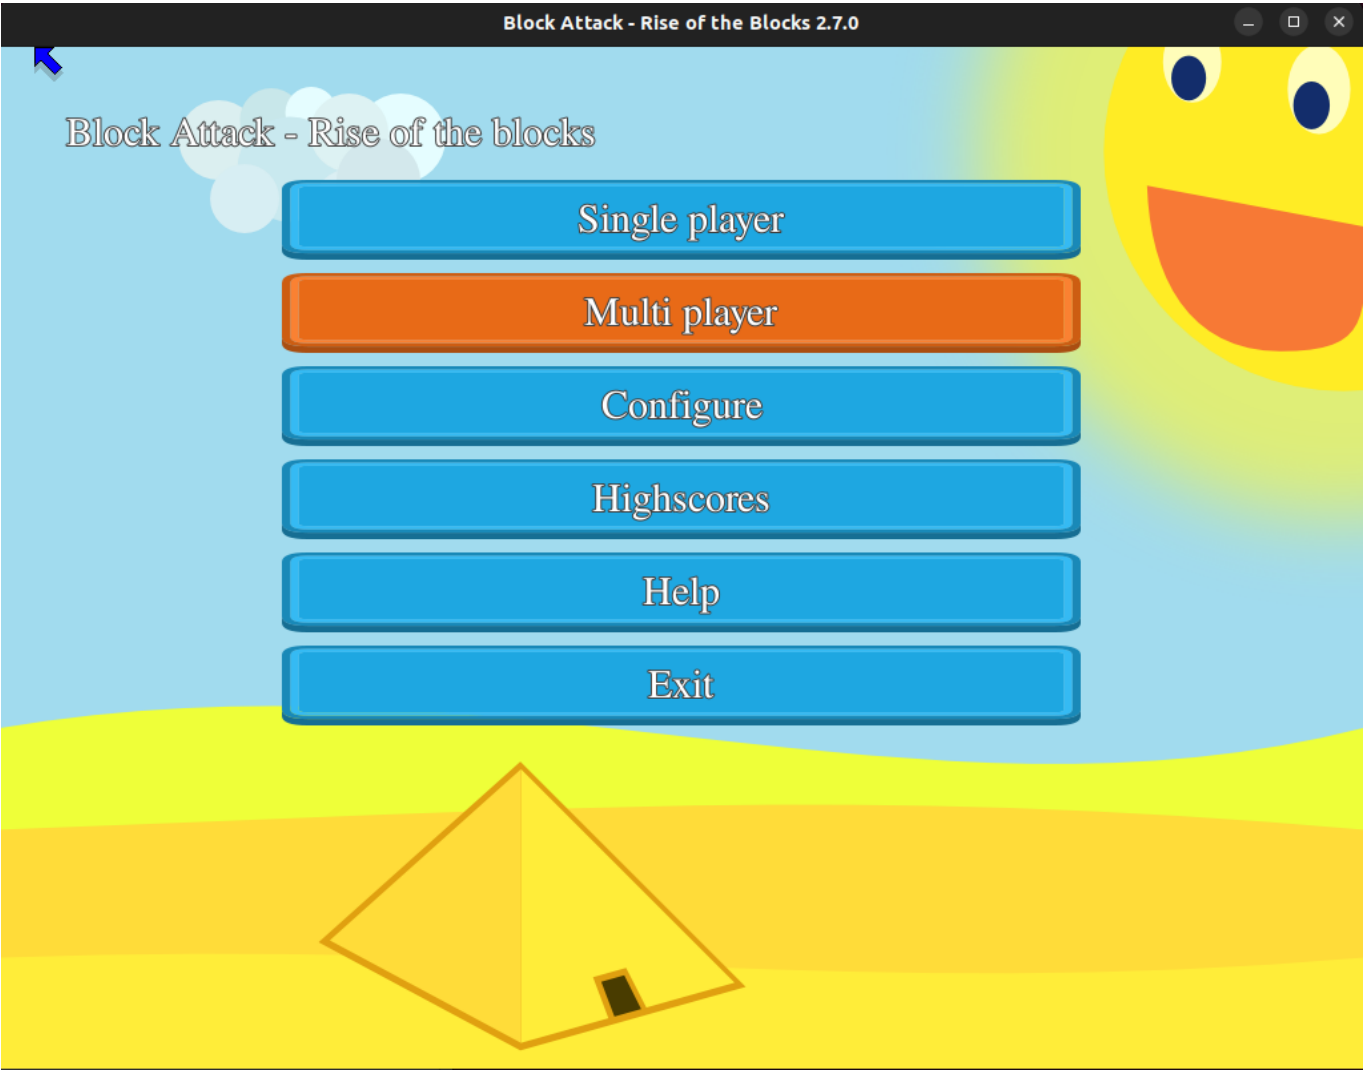

A terminal window titled 'espaghetty@Emperor: ~' with standard window controls. The user enters a series of commands: first, a single slash '/' which results in a 'bash: /: Is a directory' error; second, 'cis106' which results in 'cis106: command not found'; third, 'cd; git clone git@github.com: Espaghetty/cis106'. The output shows the cloning process failing with 'ERROR: Repository not found.' and 'fatal: Could not read from remote repository.' A message suggests checking access rights. The user then runs 'cd; git clone git@github.com:Espaghetty/cis106', which succeeds, showing progress for enumerating, counting, and compressing objects, and receiving deltas. Finally, the user enters 'date', and the terminal displays 'Tue Oct 24 12:46:50 AM EDT 2023'.

```
espaghetty@Emperor:~$ /  
bash: /: Is a directory  
espaghetty@Emperor:~$ cis106  
cis106: command not found  
espaghetty@Emperor:~$  
espaghetty@Emperor:~$ cd; git clone git@github.com: Espaghetty/cis106  
  
Cloning into 'Espaghetty/cis106'...  
ERROR: Repository not found.  
fatal: Could not read from remote repository.  
  
Please make sure you have the correct access rights  
and the repository exists.  
espaghetty@Emperor:~$ cd; git clone git@github.com:Espaghetty/cis106  
Cloning into 'cis106'...  
remote: Enumerating objects: 33, done.  
remote: Counting objects: 100% (33/33), done.  
remote: Compressing objects: 100% (32/32), done.
